

ULTRASCAN 6525

Description

UltraScan-6525 executes 2-D raster and line scans with on-the-fly data acquisition at speeds up to 70 mm/s, enabling full 3-D acoustic-field reconstruction in accordance with IEC TS 62556. An intuitive, feature-rich GUI guides the user smoothly through every step of the scanning workflow.

Key Features and Benefits

- Automated, three-axis hydrophone raster-scanning with fast, programmable motion and optional manual fine adjustment
- Rigid, self-supporting, compact frame—fits custom aquariums or desktop setups
- Compatible with any third-party hydrophone
- Supports both synchronous and asynchronous data acquisition
- Water-immersible, all-plastic components eliminate galvanic corrosion of sensitive equipment
- Comprehensive software for measurement logging, analysis, and 3-D acoustic-field reconstruction
